

Setup and Run

IF you don't want to do those steps you can check the task online I hosted it for you :)

<https://instascaler.azurewebsites.net/>

<https://instascaler.azurewebsites.net/categories>

To Run the Task on your Local Host You Need:

1 - Windows Operating System.

**2 - Download and Setup .NET Core from [Link](#)
And choose .NET Core SDK 2.2**

3 - Download and Setup Visual Studio from [Link](#)

4 - Download and Setup SQL Server 2017 Express edition from [Link](#).

5 - Extract the Project Zip file and open the compagin.sln icon which will open the whole project inside the VS.

6 - You need to install the dependencies for the project.

7 - After that all the errors and warnings will gone then you need to open the view menu -> SQL Server Object Explorer -> Add SQL Server -> Local ->

Desktop***Express -> Open Server -> Databases -> Create Database -> name it "campaign" -> Run Query and then run the attached SQL file.**

8 - Open appsettings.json and comment the live server DB (Line 4) and Choose the Local DB config (Line 3)

9 - Rebuild Project Ctrl+Shift+B

20 – Start it Ctrl+F5
